Connected health for holistic care: technology that integrates prevention, diagnosis, and wellness.

## Company - Diagnostica

Diagnostica, established in 2020 in Argentina, specializes in the development of telemedicine solutions that encompass medical devices, software, and connectivity. In collaboration with Doc24, it creates a digital health ecosystem with both national and international scope.

## Issue and Resolution

In light of overcrowded healthcare systems and limited access in remote regions, we provide interconnected devices that facilitate remote medical consultations through advanced technology and expert care.

## Products

- Diagnostica Station
- Multi Diagnostica
- Diagnostica Briefcase
- Digital Health and Wellness App

## Key attributes:

- Real-time video consultations with healthcare professionals.
- Integration of multiparameter devices, including ECG, oximetry, blood pressure, and temperature monitoring.
- Automatic synchronization with the electronic health record.
- Recording, traceability, and real-time data analysis.
- Platform interoperability and customization.

## Differential

Our proposal integrates medical hardware, proprietary software, and clinical expertise into a comprehensive solution that is adaptable to various environments. It has been validated in extreme contexts, including Antarctica and rural regions of Argentina.

## Additional Information

We collaborate with Inventu to design and produce locally. Our offerings include scalable, customized, and high-impact healthcare solutions.

## Key milestones of the company
