

## Company profile

**Sector:** Technology

### Products & Services:

Artificial Intelligence Solutions,  
Custom Software Development,  
and Logistics 4.0 initiatives  
focused on operational optimization  
and digital transformation.

**Founded:** 2020

**Team:** 20 professionals

### Technologies:

Web and mobile development with  
Java, JavaScript, and React Native.  
Implementation of AI agents and  
Large Language Models (LLMs)  
using Amazon, Google, and OpenAI  
suites.

## Key Metrics

+50 proyectos ejecutados

+20 clientes

Multiple industries across various  
Latin American countries

## Team

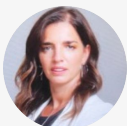

**Hernán Manzur**  
CEO & Co-Founder

**Alejandra Ripa**  
Co-Founder

We build next-gen solutions and accelerate  
your AI adoption to turn ideas into results.

## Company

Jedify is a technology startup founded on the pillars of **inclusion, diversity**, and **continuous learning**, led by professionals with extensive experience managing regional technology projects.

We believe that organizations must embrace **artificial intelligence** and **advanced technologies** to remain competitive and evolve toward more digital and intelligent models. At Jedify, we help them achieve this effectively—integrating **AI, strategy**, and **development** to turn digital transformation into measurable business results. Our operations are structured around three main pillars: **custom software development, applied artificial intelligence for operational efficiency**, and **specialized system integration**. We are also the regional partner of **GullsEye Logistics Technologies**, a global provider of TOS (Terminal Operating System) solutions.

## Challenge & Solution

Organizations today face the challenge of **adapting to an increasingly digital and AI-driven environment**, where the lack of technological integration, manual processes, and limited data-analysis capabilities restrict efficiency, innovation, and competitiveness.

Jedify drives **digital transformation** through technological solutions that integrate **AI, automation**, and **custom development** — helping companies optimize processes, make data-driven decisions, and transform technology into a true growth engine.

## Products & Services

Jedify enables the digital transformation of organizations through technological solutions that integrate artificial intelligence, custom software development, and Logistics 4.0 technologies.

- **Artificial Intelligence**

We design and implement **AI solutions** tailored to each organization's needs and technological maturity. Our work includes large language models, computer vision, intelligent automation, and advanced analytics to solve real-world challenges and accelerate the transition toward more digital, efficient, and predictive operations.

- **Custom Digital Solutions**

We support companies throughout the entire development cycle—from concept to final product—creating **web and mobile applications** that align with their AI strategy. Our solutions are innovative, scalable, and user-centered.

- **Logistics 4.0**

We enhance operational efficiency with digital solutions designed for the logistics and port industries. In partnership with **GullsEye Logistics Technologies**, we implement its **TOS Gen2** system—a multimodal platform for port terminals that unifies and optimizes real-time operations management.

## Accelerating AI Adoption

Our **AI 360° Program** is an innovative initiative that combines the practical training provided by **MindHub** with the technological expertise of **Jedify**, enabling organizations to achieve real AI adoption.

Through a collaborative model that blends training, strategic use-case identification, and guided implementation, the program ensures that teams not only learn about AI but also apply it to achieve tangible and sustainable results.

**This synergy between education and solution development allows AI to evolve from a theoretical concept into a true driver of operational improvement and business value.**
