LATAM, Fintech, SaaS, Banks

## 02 Problem & Solution

### The Problem

Automated scans don't detect critical logic vulnerabilities in APIs and authentication. The time between detection and remediation leaves systems exposed for weeks or months.

### Our Solution

We find critical vulnerabilities that others miss and accompany complete remediation through production deploy. Detection, validation, correction, and deployment.

## 03 Why OliveX?

### We don't just detect: we resolve

We guarantee effective remediation through deploy, not just PDFs with findings.

### Real-world experience at scale

Vulnerabilities found in systems used by millions: Apple, Microsoft, Meta, Visa, Disney.

### Offensive skills + development expertise

We understand both attacks and code, which is why we close vulnerabilities effectively.

## 04 Services

### Penetration Testing

Deep manual testing for logic vulnerabilities, insecure APIs, and errors that automated scanners miss.

### Bug Bounty Management

Private bug bounty programs via OxBounty, with triage, prioritization, and effective remediation.

### Security Due Diligence

Risk assessments for investments or acquisitions, validating technical security of products.

### OxBounty Platform

Continuous vulnerability management, protecting systems in real-time at scale.

## 05 Team

**Damian Gambacorta**  
CEO & Ethical Hacker

**Matias Amendola**  
CTO

**Nicole Delaporte**  
Vulnerability Remediation Manager

## 06 Latest Pentest

### Fortune 500 Client

We identified 57 vulnerabilities (12 critical) in an enterprise platform with millions of users. We didn't just report: we accompanied complete remediation through production.
