# We innovate with technology to simplify business processes

## Company

Through our four service areas, we develop and implement business management systems. Over the past six years, we've developed Glowix, a sales management platform based on the concept of omnichannel. We've also developed business intelligence solutions with Microsoft Power BI.

## Problem / Solution

The dynamics of B2B commerce are changing rapidly, and at Neos, we create software solutions that simplify everyday processes. With our new Glowix platform, we're helping companies boost their sales through a single omnichannel platform integrated into their business management system.

## Products / Services

Glowix is a business management platform based on the concept of omnichannel. Its modules include:

- Native App (Android/iOS)
- Mobile Sales Force
- B2B/B2C E-Commerce
- PRO Sales
- OMS

It currently integrates with SAP, Odoo, Dynamics GP, Tango, Neos ONE, Magnus ERP, and Mercado Libre.

## Differential

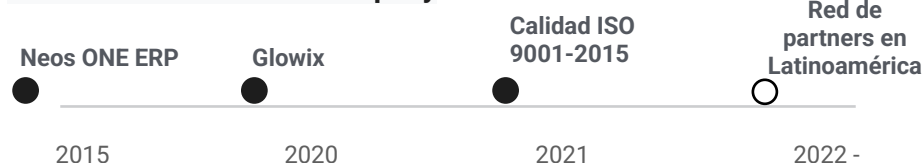

Providing technological support to all sales channels is challenging, complex, and very expensive to maintain.

With Glowix, we unify and simplify these processes, allowing us to optimize resource utilization and significantly reduce associated costs.

## More information

Our products and services have been highly successful in the Argentine market, and we believe it's time to expand our operations to the rest of Latin America. To this end, we are developing a network of partners who will support us in the commercialization of Glowix and achieve tangible benefits in the short term.
