

# We Make The Future Clear

## Profile

**Office in:** Argentina, UK & Spain

**Expected growth:** 2x in 2025

**Industry:** Energy, Robotics & Artificial Intelligence

**Product type:** Data as a Service

**Foundation date:** 2019

**Team members:** +40

**Raised Capital:** 3MM

**Revenue 2025:** 4MM

## Our Proposal

We provide preventive, accurate and actionable data to the energy industry, optimizing the decision making process having a favorable impact on the environment

We guide energy sector companies through the dynamic energy transition, and assist them in optimizing their operations.

## Management Team

Ian Bogado, CEO

Amelia Bálsamo, CTO

Diego Montesano, COO

## How does it work?

- 1 Automate devices inspect the facilities **collecting information**.
- 2 The data is uploaded to the cloud and **analyzed using artificial intelligence** to detect patterns and events.
- 3 Customers have access to our **platform** with relevant, actionable, and processable information to monitor their assets.

## Software as a Service

We combine robotics, artificial intelligence and connected devices into a deeply integrated **Platform** with data delivery solutions.

We **reduce maintenance times and costs**, identifying risks and generating reports.

## Our Clients

## Our Milestones

G20 Winner in Energy transition

Our 1st 5 years contract with PAE in automated inspection routines

Offshore flight to 50 miles with Total Energies.

Quantifying **Greenhouse gases** in real time in Shell

Deep learning network to detect corrosion in **motion blades** in East Anglia One, UK.
