Abstract

This paper delves into the international integration of labour-intensive manufactures from two different standpoints. Firstly, by analysing the factors which explain these sector's exports over the past years, especially identifying those related to demand and to Argentine exporters' capabilities to compete abroad. Secondly, by estimating potential trade flow changes arising from the different trade liberalization scenarios, which take into account the elimination of tariffs with our main trade partners as well as at the multilateral level.

*Martín Cicowiez carried out the partial equilibrium estimates included in Section 4. The author thanks Martín Cicowiez, Fernando Pioli and Néstor Stancanelli for their comments and Tomás Castagnino, Martín Maignon and Mariángeles Polonsky for their help in data collection and processing. A previous version of this paper was presented at the XLI Annual Meeting of the Argentine Association of Political Economy, Catholic University of Salta, November 2006.
